Patent  
10/691,483

§2143.01(I). Applicant asserts that the nature of the problem in Kirmuss is dealing with high temperatures in car trunks as "rarely is the temperature of the space of trunks regulated, and the internal temperatures in the unregulated trunk often rise to 150° F or more" (para [0012]). The Examiner has therefore not shown a proper basis for making the combination of Kirmuss and Beckert under such a test to the contrary.

For at least the foregoing reasons, each of independent Claims 1 and 12 is believed to be clearly patentable over any permissible combination of the teachings of Kirmuss, Chuang and Beckert. In addition, dependent Claims 2-7, 13-16 and 18-20 are believed patentable as depending from a patentable independent Claim 1 or 12, and for reciting further distinguishing limitations thereover.

Since the Applicant has fully responded to each rejection set out in the final Office Action, it is respectfully submitted that in regard to the above remarks that the pending application is patentable over the art of record and prompt review and issuance is accordingly requested. Should the Examiner be of the view that an interview would expedite consideration of this Response After Final Rejection or of the application at large, request is made that the Examiner telephone the Applicant's undersigned attorney at (908) 518-7700 in order that any outstanding issues be resolved.

Respectfully submitted,
